***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 16<sup>th</sup>, 2004 has been entered.

***Response to Arguments***

2. Applicant's arguments with respect to claims 1-37 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Leon (U.S. Patent No. 6,424,954) in view of Lewis et al (U.S. Patent No. 6,233,565).

Art Unit: 3621

5. As per claims 1-5, 10, 12, 19, 24-29, 30, 35 and 36, Leon teaches a method of printing a VBI such as a ticket, a coupon, a mail piece, a travelers, check or a currency, comprising generating a message digest by hashing relevant 2-D bar code information, and generating a textual digital signature from the message (*see fig 9*). Leon fails to teach an inventive concept including a stateless cryptomodule and a plurality of user computer in communication with the cryptomodule to communication digital signature. However, Lewis et al teach an inventive concept including a stateless cryptomodule and a plurality of user computer in communication with the cryptomodule to communication digital signature (*see column 30 line 30-50*). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the inventive concept of Leon to include Lewis et al's inventive concept including a stateless cryptomodule and a plurality of user computer in communication with the cryptomodule to communication digital signature because this would have provided a tamper resistant system the would be able to communicate with the remote location for secured transfer of information.

6. As per claims 6-9, 13-16, 20-23 and 31-34, Leon teaches a method of the digital signature and the 2-D bar code include sides (such as right, left, top and bottom) (*see fig 9*).

7. As per claims 11 and 37, Leon teaches a method wherein the relevant information including one or more of indicium version number, an algorithm identifier, a certificate serial number, a postage security device manufacturer identifier, a model identifier, postage device

Art Unit: 3621

serial number, an ascending register value (*see fig 1A, 1B, table 3 column 42 and table in column 60*).
